Fortini, Peter; **Barakat, Richard**
Genetic algebras for tetraploidy with several loci.
J. Math. Biol. **9** (1980), *no. 4,* 297–304.

Authors' summary: "The algebra of gamete multiplication corresponding to a population of autotetraploids which differ at n loci, each with an arbitrary number of alleles, is proven to be a genetic algebra, irrespective of the mode of segregration of the n loci."
