Service as Director of iCAMP (2009-2015)

Served as director of iCAMP (Interdisciplinary Computational and Applied Mathematics Program), the NSF funded undergraduate research and education program at UCI to recruit and nurture students to achieve advanced degrees in STEM areas. The program offered M77 sequence to 1st and 2nd year undergraduate students during the regular school year and selected on average 20 students per year for an 8 week summer camp to do supervised research on campus in four general areas: image and signal processing, game simulations, and collaborative filtering (machine learning). A modern computer lab was available with concerted supervision by faculty, postdocs and graduate students. Four full cycles of teaching and summer research were completed. Many women and minority students were among the summer iCAMPers.

One of our goals was to offer a unique learning and research experience for first and second year undergraduate students based on hands-on programming and concrete applications in the digital age. Some fun problems were: barcode deblurring, cancer cell shape classification and tumor identification, Blokus games, contextual landmark tracking, sound demixing, data ensemble based predictions (random forest, boosting, stacking). Mathematically, students learned to combine linear algebra, statistics, and optimization techniques.

Many students produced interesting and novel results for conference presentations at regional and national levels and SIAM publications. A sampler of such activities was:

(1) Fernando Aguilar, Salvador Badillo-Riose and Vernice Mojica presented at the Society for Advancement of Chicanos and Native Americans in Science (SACNAS) National Conference in San Jose, October 27-30, 2011.

(2) Swati Bhonsle, Alissa Klinzman and Allison Mok presented at the Pacific Coast Undergraduate Mathematics Conference at Cal Poly Pomona on March 10, 2012.

(3) Feature Identification for Colon Tumor Classification (by Melody Lim, Anthony Hou, Natalie Congdon, and Janine Chua), SIAM Undergraduate Research Online (SIURO), Vol. 6, Oct. 28, 2013. DOI: 10.1137/13S012212

(4) Contextual Point Matching for Video Stabilization (by Ling Han Meng, Joseph Geumlek, Holly Chu, Justin Hoogenstyrd), SIAM Undergraduate Research Online (SIURO), Vol. 6, Dec 30, 2013. DOI: 10.1137/13S012285

The program supported math-ICS faculty (H-K Zhao, S. Eichhorn – M. Welling, A. Ihler), postdocs (E. Esser, F. Park, W. Ma, Y. Lou, R. Lai, Q. He, B. Murphy – D. Gorur), and graduate students (M. Yu, R. Campbell, J. Liang, J. Feng, J. Rische, R. Ritch, A. Konstorum, J. Wilkinson, S. Zhang – S. Ahn, Q. Liu, S. Forouzan, Nick Gallo, Wei Ping) either during the school year and/or summer months. The program offered stipend and on campus housing with meal plans to undergraduate students from a broad range of ethnic and scientific backgrounds across multiple disciplines and departments.

Our assessment data showed that after participating in the iCAMP courses and summer research program, there was an 1) increase in the likelihood the student will consider graduate school or STEM industry careers, 2) increase in positive attitude towards science and increased confidence in their analytical abilities and 3) a net improvement in a skills based mathematics and data analysis exam.
